Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-28 and 30-31, drawn to a transaction method utilizing identifiers, classified in class 705, subclass 61.
- II. Claim 29 and 32, drawn to a program for use on a transaction apparatus, comprising a cooling off period., classified in class 705, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because extending the cooling off period, as stated in invention II has no dependency on a system for making transactions as stated in invention I. The subcombination has separate utility such as extending the cooling off period.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
